

Family Incentive Trial

This was a research study on how family based outdoor activities can help in myopia prevention in children. The research was led by the National University of Singapore and the Duke NUS Singapore in collaboration with NParks and Nature Society (Singapore) (NSS). From June 2011 to February 2012, NSS was involved in providing guides, every Saturday morning and Sunday evening, to conduct guided walks in different parks and nature areas in Singapore for the children in the intervention group of this study.
